

DYNAMIC DIGITAL SUSPENSION (DDS)

The INFINITI Q60 features an all-new electronic suspension system, **Dynamic Digital Suspension (DDS)**, which monitors the vehicle's body roll, pitch and bounce rate to deliver a secure ride by reducing unwanted steering feel and vibrations

NEW DAMPERS

The DDS is controlled through a new set of electronically adjustable dampers, which regulate control of the variable damping force, offering a soft or firm ride

STIFF BODY

The DDS system is aided by the stiff body of the Q60, which absorbs bumps before they have an effect on body control and ride comfort

LIMITED NVH

The system can filter out a degree of negative feedback from the suspension to limit road noise and minimize any low-level, constant vibrations

UPGRADED SUSPENSION

Equipped with DDS, the Q60 features a range of new software and hardware, including new suspension links and bushings in addition to the electronic dampers.

COMFORTABLE RIDE

Soft damping control has been engineered to balance comfort and handling, ensuring that bumps and undulating roads are absorbed as much as possible

AGILE HANDLING

Firmer damping control delivers more agile handling while providing the best performance for a flat and stable ride

CUSTOMIZABLE SUSPENSION

DDS is fully customizable, allowing drivers to personalize the level of damping force for greater comfort or agility

DRIVE MODE SELECTOR

The two 'soft' and 'firm' electronic damper settings offered with DDS are available for selection through the Drive Mode Selector
